Art Unit: 1731

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16 and 21-29, drawn to a filtration addition system, classified in class 162, subclass 249.
- II. Claims 17-20, drawn to a method for producing a uniform filtrate, classified in class 162, subclass 60.
- III. Claims 30-36, drawn to a method of treating fibrous material in a digester, classified in class 162, subclass 47.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II, III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used to treat filtrates from a pulp washer and does not require the comminuted fibrous material of Group III nor the measuring of the filtrate of Group II.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the method of Group III does not require the measuring and controlling of the filtrate through each nozzle as required by Group II. The claims of Group II do not require the improved heat recovery required by Group III.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
